Eusuf Kanchwala

+919479721383 | kweusuf@gmail.com | linkedin.com/kweusuf | github.com/kweusuf

Backend Engineer with 8 years building enterprise-grade data protection, disaster recovery, and AI agent platforms. Expertise in Java, Go, and cloud-native microservices across AWS, Azure, and GCP, including production LLM agent systems for automated customer support. Patent co-inventor for "Cyber Recovery Mechanism".

Technical Skills

Core Expertise: Java, Golang, Rust, Distributed Systems, Microservices, AWS, Azure, Kubernetes, Spring Boot, SQL/NoSQL Databases
Technologies: Python, Bash, Clojure, GCP, GraphQL, Kafka, RabbitMQ, Redis, Docker, Jenkins, Git, LLM/RAG (ADK, Gemini, Ollama)
Security & Compliance: RBAC/SSO, SonarQube, Snyk, Gitleaks, Blackduck

Experience

Helpshift - A Keywords Technology Pune | Remote
SDE-3 May 2025 - Present

- Led the fix for a P0 bug where issues could be over-assigned to agents, then designed and shipped a priority-group (class-FIFO) assignment mechanism for the live-chat issue-assignment service in **Rust/Redis**, replacing random assignment with ordering based on each agent's confirmed workload. Rolled out behind an opt-in, fail-open gate so live traffic was never at risk, and documented in a design spec covering rules, risks, fairness analysis, and rollout.
- Delivered production features for **Care AI**, Helpshift's agentic player-support product built on Google's Agent Development Kit (ADK) and Gemini models, throughout Hypercare: guardrails, multi-stage prompt validation, a PII detection and masking layer, and retrieval over FAQ, procedure, knowledge base, and glossary sources with escalation to a human agent.
- Led design and development of backend systems for an enterprise automation platform enabling configurable Branding & Customisation, FAQs and customer complaint workflows and self-service experiences at scale.
- Partnered with product and platform teams to ship automation features like Duplicate and Replace Bots, App Level Permissions, used by global gaming clients.

InfoBeans Technologies | NetApp Indore | Bangalore
Consultant | Member of Technical Staff 3 Apr 2022 – Apr 2025

- **Patent Co-inventor & Technical Lead** *(Patent Pending)*: Designed and prototyped "Cyber Recovery Mechanism", an air-gapped isolated recovery system for ransomware forensic analysis - productized as Isolated Recovery Environment in NetApp's Ransomware Resilience service.
- Engineered 8+ microservices in Java and Go for NetApp SnapCenter and VMware plugin, reducing backup operation latency by 25% and improving overall throughput by 40%.
- Developed core failover/failback orchestration logic for Disaster Recovery-as-a-Service in BlueXP, enabling seamless DR operations across ONTAP, FSx, ANF, and CVO storage platforms.
- Led security compliance for US EO 14028, achieving a 100% reduction in high-severity vulnerabilities.
- Designed and executed PostgreSQL-to-cloud data warehouse migration strategy for IoT client, implementing sharding, regional load balancing, and disaster recovery, resulting in 45% infrastructure cost reduction.

Impetus Technologies Indore
Senior Software Engineer June 2018 – Apr 2022

- Core contributor to LeapLogic, an ETL modernization platform serving Fortune 500 clients (BofA, AmEx, Wells Fargo), enabling migrations from legacy systems (Teradata, Netezza, Oracle) to cloud-native platforms (AWS Redshift, Snowflake, Databricks).
- Built an in-house message queue in core Java, used in production for asynchronous job delivery.
- Reduced metadata discovery time by 60% through caching optimizations.
- Architected and implemented enterprise-grade RBAC and SSO authentication system from scratch using Spring Security, enabling secure multi-tenant access control.
- Built a SQL translator (Hackathon project to production pilot), improving trial adoption by 30%.
- Led and mentored a team of 4 engineers, consistently delivering sprints 25% ahead of schedule through effective task decomposition and agile practices.

Tata Consultancy Services Mumbai | Remote
Intern - Data Mining and Insights June 2017 – Nov 2017

- Developed Python-based data processing utility using advanced DOM parsing to extract insights from telecom counter data, reducing processing time by 55% and improving analytics accuracy by 25%.

Projects

LLM Social Simulation Framework | *Python, Pydantic, LLM Agents, Ollama, SQLite* Sep 2026 – Oct 2026

- Built a configuration-driven framework in Python for multi-agent LLM social simulation, running complete 22-player games with per-agent personas, decaying per-observer memory, and structurally enforced information channels across 452 passing tests.

Red Rising Compendium | *Python, NLP, Static Web App* July 2026

- Built a spoiler-safe knowledge graph and static web app that parses the EPUB corpus into character, faction, location, and event entities with chapter-level temporal attribution.

Novel QA | *Golang, Ollama, RAG* July 2025 – Aug 2025

- Built a retrieval-augmented generation (RAG) system in Go that grounds an Ollama-hosted LLM in a custom document corpus to answer domain-specific questions.

URL Shortener | *Golang, Go Kit, MongoDB, Docker, Make* April 2025 – May 2025

- Built production-ready URL shortener with TTL-based expiration, featuring Go Kit microservices architecture, MongoDB persistence, and collision-resistant hash generation.

TailFile | *Java, JSch, Swing* Sep 2020 – Jan 2021

- Created a Java desktop application for real-time log file monitoring across remote servers via SSH, eliminating repetitive terminal operations for development teams.

Education

SVITS Indore
Bachelor of Engineering in Computer Science July 2014 – June 2018
